EDUCATION

- HKUST** | B.Eng. Computer Engineering, Extended Major in Artificial Intelligence 09/2024 – Expected 2028
- **Key Coursework:** Financial Management, Data Structures & Algorithms, AI/ML (PyTorch), Statistics, Information Systems Management
 - **Activities:** Astrix (Cansat team), Member (01/2026 – Present) | Cricket Team, Executive Committee Member (08/2026) | JPMorgan Takeover Day, Selected Participant (Aug 2025)

PROFESSIONAL EXPERIENCE

- NGMT Ltd** | Software Engineering Intern Jul 2026 – Sep 2026
- Architected a generative-AI web platform end-to-end using Next.js, FastAPI, and PostgreSQL, targeting sub-90s generation latency.
 - Engineered per-creator LoRA training pipelines (Python, PyTorch, kohya-ss) on a studio GPU with async job queuing, automating handle-to-model in under 4 hours.
 - Containerized full system with Docker, authored architecture diagrams, runbooks, and enforced security best practices across all API surfaces.
 - Integrated a ComfyUI-backed inference API with vision analysis and dataset preparation modules to support scalable model deployment.
- Fusion Asset Management** | Summer Analyst Jul 2026 – Aug 2026
- Compiled quarterly investment reports by analyzing market outlook to assist the team in formulating targeted investment strategies for institutional clients.
 - Optimized 8 fund portfolios to evaluate risk-adjusted returns by leveraging S&P 500 benchmarking and calculated portfolio weightings.
- MCM Wealth Management** | IT Intern Apr 2026 – Jun 2026
- Deployed 3+ full-stack apps like a real-time crypto dashboard integrating live market data for portfolio monitoring; remediated critical vulnerabilities across 2 production sites via CVE patching and dependency upgrades, eliminating active malware vectors.
 - Optimized frontend performance across legacy codebases, improving average page-load times by ~40% through bundle and asset refactoring.
 - Refined Stop-and-Reverse FX algorithm for USD/EUR, backtesting on historical data and improving directional signal accuracy by ~5–7%.
- Red Bird Racing EVRT, HKUST** | Embedded Software Team Member 01/2026 — Present
- Developed C++ firmware for real-time CAN bus communication, decoding live signals via SAVVY CAN across powertrain and battery systems.
 - Onboarded data-logging modules processing 500+ data points per second in order to support pit-crew telemetry for tire and energy management.

LEADERSHIP ENRICHMENT & CONSULTING PROJECTS

- PwC AI & Cloud Consulting Day** | Selected Attendee May 2025
- Garnered hands-on exposure to end-to-end data analytics consulting workflows - including customer segmentation, predictive modelling, generative AI enablement, and RegTech analytics via workshops led by senior consultants in cybersecurity, and intelligent automation.
 - Applied prompt engineering, model evaluation, and AI governance frameworks to a stablecoin case study; developed understanding of how cross-functional consulting teams translate business problems into scalable data-driven solutions leveraging NLP and responsible AI advisory.
- ContractLens, AI Legal Companion** | Hack the East 2026 – Top 8 of 65 Teams, Co-Builder 03/2026
- Built a Chrome extension in 24 hours (FastAPI, React, AWS, MiniMax LLM), translating legal terms into plain English; backend processed docs in under 3 seconds; achieved 90%+ clause-detection accuracy and resolved a critical AWS serverless deployment failure.
- Astrix CanSat (Funded by NASA)** | Main Team Member 01/2026 -Present
- Selected onto the CanSat main team to represent HKUST at the international CanSat Competition in the United States; designed/built a satellite payload (soft-drink-can form factor) capable of collecting/transmitting atmospheric data during descent.
- Retrieval-Augmented Generation (RAG) API** | Independent Researcher 09/2025
- Built a production-ready RAG API (FastAPI, Chroma vector DB, Ollama) with REST query and ingestion endpoints, auto-chunking and embedding, Swagger UI, and containerized DevOps deployment.
- Credit Card Fraud Detection: Machine Learning for Payments Risk** | Researcher 08/2026 – 08/2026
- Built a fraud classifier (logistic regression, XGBoost) on real transaction data under class imbalance, optimizing F1 and ROC-AUC.
 - Engineered and scaled features applied class weighting and modeled threshold trade-offs in a payments-risk context for a real-time authorization pipeline.
- KavaIOS, AI Food Waste App** | Inter-University GenAI Hackathon (UN SDG 12), Developer 09/2025
- Built an iOS prototype (SwiftUI, on-device object detection) for food-inventory tracking, expiry reminders, and LLM-powered recipe generation; delivered a working demo addressing UN SDG 12 (Responsible Consumption) within a hackathon timeframe.
- 24Hour Race** | Participant 10/2023
- Participated in student-led charity relay, collectively raising over HKD 750,000 for NGOs combating human trafficking across Asia.

CERTIFICATIONS, SKILLS & INTERESTS

- **Certifications:** Google Cybersecurity Foundations, Google Manage Security Risks, Python Basics – University of Michigan, Quantitative Finance & Algorithmic Trading in Python – Udemy (In Progress), CompTIA Security+ (In Progress)
- **Languages:** English (Native), Hindi (Native), Cantonese (Basic)
- **IT Skills:** MS Office | Python | C/C++ | JavaScript / TypeScript | SQL | HTML/CSS | SwiftUI, FastAPI | Django | React | Next.js | PyTorch | Scikit-learn | NumPy | Pandas, Docker | AWS | PostgreSQL | Chroma | ComfyUI | Ollama | Git, STM32 | ESP32 | Arduino | SAVVY CAN
- **Interests:** Cricket | swimming | running
